Overview

What is a 5G industrial base station?

With a computing board added to the traditional base station, it provides functions such as precise clock synchronization, enhanced connection capabilities, deterministic delay guarantee, and support for centralized and cloud-based PLC. In addition to traditional base station functions, 5G industrial base stations offer four key features:.

How many 5G base stations will be deployed by 2024?

By 2024, more than 90% network will be deployed 5G. The deployment of 5G base stations in China will exceed 5 million, and 5G base stations will exceed 500,000 in South Korea. The dispersed deployment of.

How can a 5G base station be truly global?

To develop truly global 5G coverage, base stations will need to be installed across the world in some extremely inhospitable environments. This means that the new generation of base stations needs to be designed with environmental challenges and extreme weather in mind, such as the effects of humidity, heat and wind.

What is the evolution of 5G network architecture?

Evolution of 5G Network Architecture The 5G network evolves towards cloud-based network, simplified bearer, miniaturized wireless base stations, and intelligent O&M, among which the cloud-based network is the key. 5G accelerates ICT network architecture transformation.
