

# 72v inverter changed to 12v inverter

## Overview

---

What is 72V to 12V isolated DC-DC power converter?

72V to 12V isolated DC-DC power converter is a step down converter which widely used in artificial intelligence, communication base stations and industrial control, with range of input voltage 50V to 90V DC, output current 8 amps and output power 96 watts, up to 92% high conversion efficiency at low price.

When does the inverter output voltage go into error 72?

At that point the inverter output voltage starts getting less stable (jumps between 238 and 220) until it goes into error 72. The time this usually happens for me is at the end of the day 16:45 when my PV generation starts to match my load (+-400W) for about 10 - 15mins. During that time I have risk of getting error 72.

What is 72V to 12V buck converter?

72V to 12V isolated DC-DC converter is a buck converter that uses a synchronous rectification technology, and features high efficiency and power density. It provides that rated output voltage of 12V and the maximum output current of 8 amps. 100% full power, high stability output.

What is a 12V inverter?

A 12V inverter is a device that converts 12V DC electric from your leisure batteries into the standardised AC current in your country of origin (120AC for the states, 240AC for the UK). It integrates into the electrical setup inside your campervan.
