

All-vanadium liquid flow battery brand

Overview

What is a vanadium redox flow battery?

A vanadium redox flow battery (VRFB), also known as a vanadium flow battery (VFB) or vanadium redox battery (VRB), uses vanadium ions as charge carriers. Due to their relative bulkiness, vanadium flow batteries are mainly used for grid energy storage.

What are the typical chemistries used in flow batteries?

Typical flow battery chemistries include all vanadium, iron-chromium, zinc-bromine, zinc-cerium, and zinc-ion. A flow battery is an electrochemical cell that converts chemical energy into electrical energy as a result of ion exchange across an ion-selective membrane that separates two liquid electrolytes stored in separate tanks.

What is a flow battery?

A flow battery is an electrochemical cell that converts chemical energy into electrical energy through ion exchange across an ion-selective membrane. It separates two liquid electrolytes stored in separate tanks. Typical flow battery chemistries include all vanadium, iron-chromium, zinc-bromine, zinc-cerium, and zinc-ion.

Who manufactures vanadium redox batteries?

A company that is recognized globally for manufacturing vanadium redox batteries (VRBs) is VRB Energy. Majority-owned by Ivanhoe Electric, a subsidiary of I-Pulse, VRB Energy is credited with developing the world's longest-lasting VRB. Their products are reliable, recyclable, safe, and scalable.
