

# **Brussels sodium-ion solar container battery**

## Overview

---

Will sodium ion batteries be the future of storage?

According to BloombergNEF, by 2030, sodium-ion batteries could account for 23% of the stationary storage market, which would translate into more than 50 GWh. But that forecast could be exceeded if technology improvements accelerate and manufacturing advances are made using similar or the same equipment as for lithium batteries.

What is a sodium ion battery (SIB)?

A sodium-ion battery (SIB) is a sustainable energy storage technology based on abundantly available raw materials. It is a commercially viable option because of the processing similarity with Li-ion battery. Most of the energy storage studies focus on the near room temperature performance of different battery chemistries.

Can sodium-ion batteries be used for energy storage?

Sodium technology therefore benefits from all the economies of scale and knowledge from lithium (retrofitting an existing lithium plant to sodium-ion technology could require only 10 % additional capital expenditure). Research suggests that sodium-ion batteries will be able to meet the growing demands for energy storage in a sustainable way.

What are the applications of sodium ion batteries in the energy industry?

One of the main applications in the energy industry is self-consumption. Smart grids depend on stable power, as intermittent power can cause grid failures. Sodium-ion batteries can offer greater stability to the power supply.

## Brussels sodium-ion solar container battery
