

# Can the inverter use AGM batteries

## Overview

---

Which AGM battery is best for marine applications?

For marine applications where vibration resistance matters, AGM batteries with 0.3C rates paired with low-wattage inverters ( $\leq 500\text{W}$ ) prove most durable. Always consult the battery's spec sheet – some “deep cycle” lead-acid models actually have lower C-ratings than starter batteries despite marketing claims.

What are AGM batteries?

**AGM (Absorbent Glass Mat) Batteries:** AGM batteries are a type of sealed lead-acid battery that uses a glass mat separator to absorb and hold the electrolyte. They are maintenance-free, provide high performance, and are suitable for applications where space is limited.

What is a deep cycle AGM battery?

A deep cycle AGM battery is a type of sealed lead-acid battery designed to provide power to your solar panel system. It offers several benefits, including preventing overcharge when connected in series, requiring no maintenance, and being leakproof.

How do I choose a battery for my inverter?

When selecting batteries, it's important to ensure that the chosen battery's rated voltage is compatible with the inverter and matches the system voltage. Additionally, the depth of discharge is a critical consideration.
