

Container generator noise reduction

Overview

How can I reduce the noise from my Generator?

You could also try landscaping to reduce your generator's noise output. While not as effective as regular acoustic panels, changing your land's elevation or planting shrubs around the generator could considerably reduce the decibel rating. Fitting your generator to the floor and surrounding it with pebbles could cut noise levels even further.

What are the benefits of a small engine sized generator?

Smaller engine-sized units can incorporate an exhaust inside the frame for a reduced overall footprint. Multi-functional acoustic louvres allowing airflow through the unit whilst simultaneously reducing noise created by the generator heard outside the enclosure.

Can a generator be housed in a container?

Not all projects have a requirement for a complete bespoke solution manufactured from the ground up, open generators (mostly up to 1700 kVA) can be comfortably housed and suitably attenuated in a standard 10, 20, 30 or 40-foot ISO container.
