

Design of small wind power generation system

Overview

What is a small wind turbine project?

1.1 Project Outline This project envisages the design and implementation of a small wind turbine for electric power generation: 1-5 kW. The project encompasses the mechanical design of the wind blades, tower, gearbox, and choice of the proper electricity generator.

What is micro-wind generating?

Micro-wind generation employs wind turbines that are significantly more compact than those used in conventional wind generation, making them well-suited to domestic power generation. Micro-wind generating is a type of micro-generation that harnesses the natural energy of the wind to power a single building or an entire farm .

What is a small scale wind turbine?

The resultant design of the project is a small scale 0.5 – 2 kW electrical energy producing wind turbine. Its design is based on a 3 bladed horizontal axis wind turbine for the application of charging a battery bank in remote or isolated communities and dwellings.

What is a small scale wind energy conversion system?

Small scale wind energy conversion systems are an effective, environmentally friendly power source for household and other applications.
