

# EU Battery solar container energy storage system

## Overview

---

How many battery energy storage systems were installed in Europe in 2024?

21.9 GWh of battery energy storage systems (BESS) was installed in Europe in 2024, marking the eleventh consecutive year of record breaking-installations, and bringing Europe's total battery fleet to 61.1 GWh. However, the annual growth rate slowed down to 15% in 2024, after three consecutive years of doubling newly added capacity.

How can European policymakers help the battery storage sector?

Recommendations How can European policymakers help the battery storage sector Battery storage systems are essential for strengthening the EU's energy security and competitiveness by enhancing flexibility, providing ancillary services to secure the grid, maximising the use of renewable energy, and effectively dealing with energy price volatility.

Does Europe have a battery storage market?

Europe's battery storage market faces global competition. China led installations in 2023 with 35 GWh deployed, backed by large subsidies and supply chain dominance. The United States aims to deploy 700 GWh of energy storage capacity by 2030, as recommended by the Solar Energy Industries Association (SEIA).

What is the European market outlook for battery storage?

The European Market Outlook for battery storage shows that growth comes from the rising demand for effective energy storage. This is key for using renewable energy sources like solar and wind. These statistics underline the importance of energy storage in achieving the region's climate goals.
