

Emergency communication command base station

Overview

How do emergency command vehicles communicate after a disaster?

After a disaster, the emergency command vehicle arrives at the disaster site, and realizes data communication and relay communication with the rear emergency command center through satellite communication, ground fixed cable communication, and ground mobile communication networks.

What is the current emergency communication command?

The current emergency communication command mainly relies on communication infrastructure and is supplemented by emergency communication vehicles as well as the use of satellite networks, shortwave networks and trunking communication networks to provide the same communication services.

Which emergency communication system should be used at a disaster site?

The emergency network at the disaster site can be deployed by emergency communication vehicles; however, in the case of complex terrain environments, such as earthquakes and floods, satellite communication system is a better choice.

What is an emergency communication system?

An emergency communication system comprises the integration and application of various communication technologies and approaches in an emergency.

Emergency communication command base station

[Movable Base Stations in Mobile Networks for ...](#)

Abstract--An emergency communication system is necessary for first responders, who need to enter areas with no network coverage or damaged network infrastructure due to ...

Movable Base Stations in Mobile Networks for Emergency Communications

An emergency communication system is necessary for first responders, who need to enter areas with no network coverage or damaged network infrastructure due to natural or ...

Integrated satellite-ground post-disaster emergency communication

The reconstruction of the communication network is a precondition for the smooth implementation of rescue and disaster recovery after geological disasters. Although traditional ...
