

Energy storage peak and valley electricity prices

Overview

How do C&I energy storage projects benefit from Peak-Valley arbitrage?

C&I energy storage projects in China mainly profit from peak-valley arbitrage while reducing demand charges by monitoring the inverters' power output in real time to prevent transformers of industrial parks from exceeding their capacity limits.

Is peaking capacity a potential market for energy storage?

Peaking capacity represents a much larger potential market for energy storage. Peaking capacity historically has been provided by a combination of simple-cycle gas turbines, gas- and oil-fired steam plants, and reciprocating engines using gas or liquid fuels (FERC 2015).

Why is the C&I energy storage sector growing?

Since July, as the country experienced peak electricity demand, more and more provinces have varied electricity charges for different seasons, expanding the peak-to-valley spread and fostering growth in the C&I energy storage sector.

How much does a kWh cost in Guangdong?

In the five cities of the Pearl River Delta of Guangdong, the peak price was RMB 1.49/kWh, and the trough price was RMB 0.289/kWh, meaning a peak-to-trough gap of RMB 1.2/kWh, making Guangdong the province of the largest peak-to-valley spread as of mid-2023.
