

European and American high-quality energy storage power supply

Overview

Does Europe need energy storage solutions?

The increasing penetration of renewable energy globally, particularly in Europe, is driving the need for energy storage solutions. Just as Europe leads in renewable energy adoption, it also faces significant related challenges in grid management (Energy Institute, 2023).

What is the European energy storage inventory?

In March 2025, the Commission launched the European Energy Storage Inventory, a real-time dashboard that displays energy storage levels across different European countries. It is the first European-level tool of its kind and offers energy storage data across a full range of technologies.

Is the energy storage industry aligned with the industry's needs?

The country's policy and regulatory framework, while recognising the energy storage assets in the system, is yet to be aligned with the industry's needs. Fundamental regulatory changes are required in areas such as charges payable by the storage units or the tax incidence. Recent steps taken indicate progress.

Which country has the most energy storage capacity?

Almost 80% of the total installed energy storage capacity base, worth 7GWh, is from the residential sub-segment. Germany is among the top European countries in residential battery storage market. So far, growth has been through the volumes in the residential storage market segment.
