Overview

What is battery energy storage fire prevention & mitigation?

In 2019, EPRI began the Battery Energy Storage Fire Prevention and Mitigation – Phase I research project, convened a group of experts, and conducted a series of energy storage site surveys and industry workshops to identify critical research and development (R&D) needs regarding battery safety.

Are battery energy storage systems safe?

Owners of energy storage need to be sure that they can deploy systems safely. Over a recent 18-month period ending in early 2020, over two dozen large-scale battery energy storage sites around the world had experienced failures that resulted in destructive fires. In total, more than 180 MWh were involved in the fires.

Are battery rooms a fire risk?

Battery rooms, especially those housing large energy storage systems (ESS), are critical components of modern infrastructure. However, they also pose significant fire risks due to the chemical nature of batteries, particularly lithium-ion (Li-ion) and lead-acid batteries.

Are lithium-ion batteries a fire hazard?

However, they also pose significant fire risks due to the chemical nature of batteries, particularly lithium-ion (Li-ion) and lead-acid batteries. To mitigate these risks, the National Fire Protection Association (NFPA) has established stringent fire safety requirements for battery rooms.
