

General BMS Battery Management System

Overview

What is battery management system (BMS)?

Battery Management System (BMS) is the “intelligent manager” of modern battery packs, widely used in fields such as electric vehicles, energy storage stations, and consumer electronics.

How do battery management systems work?

Battery management system (BMS) is technology dedicated to the oversight of a battery pack, which is an assembly of battery cells, electrically organized in a row x column matrix configuration to enable delivery of targeted range of voltage and current for a duration of time against expected load scenarios.

What data does a battery management system collect?

The BMS collects data such as voltage, temperature, current, and state of charge. This data is vital for system diagnostics and performance optimization. The BMS may communicate with other devices, such as vehicle controllers or cloud-based systems, to relay real-time information about the battery’s condition and performance.

What is a multi-master battery management unit (BMS)?

NX-Tech’s BMS offers a parallel pack control which provides an advantage for scalable, modular battery architectures suitable for: A multi-master BMS allows multiple Battery Management Units (BMUs) to coordinate as peers within a battery system.
