

Global thin-film solar module production capacity

Overview

What is the global solar module manufacturing capacity?

Global solar module manufacturing capacity is set to exceed 1.5 TW by 2035, according to forecasts from the IEA. Its latest report, “ Energy Technology Perspectives 2024,” covers the production of solar, wind turbines, electric cars, batteries, electrolyzers, and heat pumps.

What is the market value of thin-film solar cells in 2023?

GlobalData estimates that global thin-film module capacity will reach 26.69GW and a market value of \$102.76bn in 2023. Considered second-generation solar cells, thin-film cells perform better in low-light and extreme temperatures, making them useful for specific applications.

How many solar panels will China produce in 2023?

In 2023, global production capacity is 1,115 GW. The IEA said China is expected to maintain its lead in solar production, but its global market share may decline slightly as manufacturing expands elsewhere and incentives drive growth.

What is the global solar photovoltaic (PV) module market value?

Source: [abriendomundo/Shutterstock.com](https://www.abriendomundo.com). The global solar photovoltaic (PV) module market has been growing at pace and is projected to rise to \$133.12bn in market value by 2028, according to Power Technology 's parent company, GlobalData.

Global thin-film solar module production capacity
