Why do we need a smart grid?

the quest for sustainable and resilient energy systems. As concerns over climate change]. Smart grids are characterized by their advanced communication, control mechanisms, and energy management systems and have a vital role in this transition. By smart grids enhance the efficiency, reliability, and sustainability of energy distribution.

Why do we need a grid-scale energy-storage system?

Under some conditions, excess renewable energy is produced and, without storage, is curtailed 2, 3; under others, demand is greater than generation from renewables. Grid-scale energy-storage (GSES) systems are therefore needed to store excess renewable energy to be released on demand, when power generation is insufficient 4.
