

Grid-connected inverter micro

Overview

What is grid connected solar microinverter reference design?

Microchip's Grid-Connected Solar Microinverter Reference Design demonstrates the flexibility and power of SMPS dsPIC® Digital Signal Controllers in Grid-Connected Solar Microinverter systems. This reference design has a maximum output power of 215 Watts and ensures maximum power point tracking for PV panel voltages between 20V to 45V DC.

What is a grid-tied solar micro-inverter?

Designed for various industrial applications—including central inverters, single-phase string inverters, and modular micro inverters—this grid-tied solar micro-inverter solution provides a robust, adaptable platform for advancing solar energy systems worldwide.

What is a solar micro inverter?

Solar micro inverters mark a significant innovation in the solar industry by offering an alternative to traditional systems that connect all solar panels to a central inverter.

How is an inverter connected to a grid?

The inverter is interfaced to the grid via an LCL filter. A relay is used to connect and disconnect the inverter from the grid whenever required by the application. The schematic in Figure 11 shows the filtering and relay schematic section.
