

Göteborg Sweden s power generation side energy storage policy

Overview

Will Sweden's electricity system be the cornerstone of its energy transition plans?

Sweden's electricity system will be the cornerstone of its energy transition plans. However, sizeable uncertainties exist in the long-term forecasts, including the scale of industrial electricity demand in the north, offshore wind development in the south, and the outlook for existing and new nuclear power plants.

What is Sweden's energy policy?

Sweden has a national energy policy target of 100 % fossil-free electricity generation by 2040. In 2022, 170 TWh of electricity was produced and the share of fossil-free was just over 98 %, see Figure 4. Electricity generation consists of: 41 % hydropower, 29 % nuclear, 19 % wind, 7 % biopower and just over 1 % solar power.

How many large-scale energy storage systems are there in Sweden?

The initiative, led by Ingrid Capacity in collaboration with BW ESS, consists of 14 large-scale energy storage systems with a total capacity of 211 MW/211 MWh. This milestone investment represents a significant step toward Sweden's goal of achieving a carbon-neutral energy system.

Is energy transition a key to achieving Sweden's national climate goals?

Energy transition plays a crucial role in reaching Sweden's national climate goals. This study demonstrates how integrating different sectors through power-to-x strategies can utilize excess electricity in systems with intermittent sources. It aligns with UN Sustainable Development Goals 7 (affordable and clean energy) and 13 (climate action).
