

How high should the outdoor wireless AP base station be installed

Overview

How high should a wireless access point be?

Cisco recommend installing the access points no higher than 40 feet (12.2 meters) to allow support for wireless clients on the ground in the immediate vicinity of the access point. Regards Dont forget to Rate helpful posts
11-12-2015 01:27 AM Hi Sandeep, Thanks for the prompt response.

How high can access points be installed?

Excerpt from doc: The access points can be installed at any height, but best throughput is achieved when all the access points are mounted at the same height. We recommend installing the access points no higher than 40 feet to allow support for wireless clients on the ground.

How difficult is outdoor access point installation?

While outdoor access point installation is generally manageable, it does come with its set of challenges. Here is a summary of the most common issues encountered during installation: Lack of Power Supply: One of the main difficulties in outdoor deployments is ensuring a reliable power source.

How high should APS be installed?

This is because the signal strength of the APs is stronger when they are installed on the ceiling than on the wall. The APs should be installed at a height of 10-12 feet from the floor. This height ensures that the signal is not blocked by any obstacles and provides optimal coverage for the room.
