

How many solar panels are required for the roof

Overview

How many solar panels can be installed on a roof?

Hence, you can set up a maximum of 12 to 15 panels for a 19.72 sq. m of roof space. You need to round your number lower instead of higher if your computations do not result in a whole number. Installing solar panels at home or the workplace is indeed an excellent way to start saving more dollars on your energy bills.

How many solar panels do I Need?

Standard Efficiency Panels (350-400W) These panels represent the most budget-friendly solar options and work well for homes with ample roof space. Modern standard efficiency panels from quality manufacturers deliver reliable performance at lower upfront costs. For a typical 7 kW system, expect to need 18-20 panels in this category.

Can solar panels be installed on a roof?

If you have space constraints, consider high-efficiency panels that can produce more electricity in less space. Solar panels cannot be installed where obstructions on your roof, like vents, chimneys, or skylights, ultimately limiting the number of solar panels you can install.

How much space do solar panels need?

SolarTech's regional production data helps hit that sweet spot for maximum value and performance. Each solar panel requires approximately 17-20 square feet of roof space, including necessary spacing for installation and maintenance. A typical 20-panel system needs 340-400 square feet of unshaded roof area.
