

How to adjust the signal strength of solar container communication station EMS

Overview

Do solar PV systems need communication and control system?

The public awareness on the communication and control of grid-connected solar PV systems are raising. However, the actual development of communication and control system for distributed solar PV systems are still in the early stage.

How does EMS control energy storage power stations?

EMS regulates the stable change of active power of energy storage power stations to avoid short-term impact on the power grid. The control objectives include 1-minute change rate and 10-minute change rate. The change rate of active power can be adjusted by configuring energy storage batteries with an installed capacity of 10%.

Which power line communication options are implemented in different solar installations?

Figure 1 shows typical power line communication options implemented in different solar installations. These installations can be divided into communication on DC lines (red) and communication on AC lines (blue).

Does EMS support single energy storage unit control?

Similar to active power control, EMS also supports single energy storage unit control when controlling reactive power. The user can set the single energy storage unit into three types: automatic control, free power generation and manual setting.
