

How to install the communication module on the base station

Overview

How do I set up a base station?

Place the base station on a stable and elevated platform, such as a tripod. Start with base module setup first. During the base station setup, the rover and the UAV do not need to be turned on. Open the Mission Planner ground station software on your computer and go to the initial setup -> Optional Hardware -> RTK / GPS Inject page.

How do I upgrade a base station module?

When upgrading the base station module, use the USB cable to connect the base station module to the computer USB interface, as shown in the following figure: When upgrading a Rover module, use a hexagonal screwdriver to open the case.

What RTCM msm4 messages does the base station send?

The Base station transmits the following RTCM MSM4 messages to the Rover station: 1005, 1074, 1084, 1094, 1124, and 1230. If additional messages need to be sent, the XBEE settings must be adjusted to increase both data bandwidth and data rate. 2) Pre-configure the GNSS module of Rover station:.

How are RTK corrections transmitted from a base station to a rover?

The two components are connected by radio (450 MHz or 900 MHz frequency bands), Wi-Fi, or through several different types of Internet-based communication protocols over which RTK corrections are transmitted from the base station to the rover receiver.
