

# Inverter power update

## Overview

---

Do I need to update my inverter firmware?

When upgrading the firmware, you replace the inverter firmware by a later version. Only update the firmware to a later version if you require the expanded functional scope of the newer version. The firmware version of your inverter is at least V4.5. You have the memory card with the firmware that matches the inverter.

How do I update the firmware on a hybrid inverter?

Hybrid Inverters (e.g., NHX-10): Firmware files may be downloaded from the manufacturer or a partner site. Updates often involve first updating the display firmware via a USB drive and then uploading the main inverter firmware via a USB-C connection to a laptop and dedicated software.

How long does the inverter firmware update take?

The update process may take 5 to 15 minutes or longer depending on the inverter and firmware size. Do not interrupt the power or disconnect cables during this time. After the update completes, the inverter may reboot automatically. Verify the firmware version on the display or app to confirm successful installation.

What happens if I downgrade my inverter firmware?

When downgrading the firmware, you replace the inverter firmware by an older version. Only downgrade the firmware to an older version if, after replacing an inverter, you require the same firmware in all of your inverters. The firmware version of your inverter is at least V4.6. You have the memory card with the firmware that matches the inverter.
