

Iran generates electricity from 40 solar panels

Overview

Where are solar power plants being constructed in Iran?

At present, a 250 KW power plant in Shiraz and also a 1,000 KW power plant in Tehran are under construction. Establishment of solar power plants especially in Tehran, Yazd, Semnan and Shiraz has been studied.

What is Iran's first solar power plant?

Shiraz solar power plant is Iran's first solar power station. It is currently being upgraded to 500 kW. Abhar Razi solar power plant is Iran's first private sector power plant. It's currently being upgraded to 7 MW. The wind farm uses 43 units of 660 kW·h. It is currently being upgraded to 93 turbine units with a total capacity of 61.2 MWh.

Can solar energy be used in different regions of Iran?

The use of solar energy in different regions of Iran is practicable. In fact, the establishment of solar power plants has been studied and is underway in several cities, including Tehran, Yazd, Semnan, and Shiraz. Currently, a 250 KW power plant in Shiraz and a 1,000 KW power plant in Tehran are under construction.

How much solar power does Iran have?

Iran has an average of 2,200 kilowatt-hour solar radiation per square meter annually, and 90% of the country has enough sun to generate solar power 300 days a year. In 2020 there were just over 300 MW of wind power, less than 1% of installed capacity.
