

Kigali high power ups uninterruptible power supply recommendation

Overview

What is a ups & how does it work?

What is a UPS?

UPS stands for uninterruptible power supply, it's a device that acts as a battery backup in case of an electrical power failure. Small UPS machines for homes and offices supply enough power for a few minutes, so there's time to turn off devices properly without losing any work.

Should I buy the best ups?

These days many of us are working from home, so buying the best UPS your budget can stretch to is even more important. You may find that you're plugging in a lot more power-hungry devices into your home power supply, and this could lead to power cuts or power surges.

Is the APC back-ups es - be700g a good choice?

If you are after a cheaper, and more simple, UPS device, then the APC Back-UPS ES - BE700G is a great choice. We would not recommend it for large businesses with lots of mission-critical computers and servers, but it offers plenty of power for homes and small businesses to keep their devices going when the power fails.

Why should you buy an ups?

Ideal for keeping mid and high-end computer systems safe, the UPS comes with Automatic Voltage Regulation (AVR) to ensure safe voltage levels for all devices that are connected. It has featured data line protection that protects communication and network equipment from power surges and spikes.
