

# Maintenance plan for lithium-ion batteries in solar container communication stations

## Overview

---

Maintaining rack lithium batteries in solar and telecom setups requires regular voltage checks ( $\pm 2\%$  of 48V nominal), BMS monitoring, and thermal management (15–30°C optimal). How should a lithium ion battery be charged before storage?

Before storage, lithium-ion batteries should be charged to the recommended state of charge (SoC) using a reliable battery management system or intelligent charger. Disconnecting the battery from the charger after reaching the desired SoC is essential to prevent overcharging.

How to store lithium ion batteries safely?

Regular voltage and state of charge tests should be conducted, the storage environment should be monitored for temperature and humidity levels, Battery Management System (BMS) firmware should be updated, and any signs of physical damage should be immediately addressed. What safety measures should be taken for storing lithium-ion batteries?

.

How to maintain a lithium ion battery in a garage?

The garage environment for lithium-ion batteries must be cool, dry, and nicely ventilated. The most efficient temperature degrees from 15°C to twenty-five°C to reduce the hazard of capacity loss and keep battery fitness. Humidity degrees should be managed to stay below 50% to save you from moisture-related deterioration.

How long does a lithium ion battery last?

perature range is 0°C to 30°C (32°F to 86°F). At this storage temperature range, the battery will require a maintenance charge within a nine (9) to twelve (12) month period. A detailed maintenance charge schedule, based on storage temperature, is located at the end of this white paper. Lithium Ion rechargeable batteries sh
