

# Mongolia Energy Storage Cabinet Energy Management System

## Overview

---

How much power does Mongolia have?

As of end 2021, Mongolia had 1,549 megawatts (MW) of installed power generation capacity. The country's energy mix included coal-fired combined heat and power (CHP) plants totaling 1,269 MW (81.9%), renewable energy sources totaling 271.2 MW (17.5%), and diesel power sources totaling 8.6 MW (0.6%).

Does Mongolia need a Bess to achieve its decarbonization target?

Mongolia's heavily coal-dependent energy sector needs a BESS to achieve its decarbonization target. Coal-dependent energy system. As of end 2021, Mongolia had 1,549 megawatts (MW) of installed power generation capacity.

What is the Bess capacity in Mongolia?

14 N-1 standard criterion is a design philosophy to enable the stable power supply in case of loss of a single power facility, such as a transformer and a transmission line. In conclusion, the BESS capacity was 125 MW/160 MWh.15 Table 4 summarizes the major applications of the BESS in Mongolia.

What factors determine the power capacity of Mongolia's Bess?

The determination of the power capacity of Mongolia's BESS was based on two factors: the required regulation reserve for accommodating additional VRE to the CES, and the required standby reserve in case of any grid event. Regulation reserve.

## Mongolia Energy Storage Cabinet Energy Management System
