

New Zealand solar Home Energy Storage

Overview

Why do New Zealand homes need battery storage?

In most New Zealand homes, a large proportion of the energy produced by solar panels is sent back to the grid because it's generated when it's not needed, i.e., the middle of the day. However, adding home battery storage to a new or existing solar power system allows you to store your unused energy.

Should I add home battery storage to my solar power system?

However, adding home battery storage to a new or existing solar power system allows you to store your unused energy. This makes your solar energy setup more efficient and maximizes the benefits of your solar PV installation.

Is solar PV a viable option for New Zealand households?

This is the first study in New Zealand to use detailed and high-quality data for both solar supply and residential demand. It shows solar PV is likely to be financially viable for a significant proportion of New Zealand households, particularly for those who consume a lot of energy.

What is solar battery storage & how does it work?

Battery storage is a smart way to offset your electricity costs as you maximise solar energy usage and minimise reliance on the grid. When combined with a new or existing solar power system, home batteries allow you to maximize the use of your solar energy by storing excess electricity produced during the day for use at any time.
