

New energy battery cabinet is turned on but no power

Overview

Why is there no power at my home?

There are primarily three reasons why there could be no power at your home.

1. I have no power from the utility company/grid and have no storage: If there is no power from the utility grid, and your system does not have storage (battery backup) installed, per government guidelines, your solar system will perform an Anti-islanding shut-off.

How do I know if my circuit breaker has no power?

No power to outlet: Using a multimeter, test for power on the wires feeding the outlet. If there is no power, you have a circuit or breaker issue. See Steps 6 & 7 above. [Why Is My circuit Breaker On but No Power To Lights?](#)

.

Why is my inverter not charging properly?

Clean Battery Terminals: Corrosion on battery terminals can prevent effective charging. Use a wire brush to clean the terminals and ensure a firm connection. Overheating can affect an inverter's lifespan and efficiency. Overheating is often due to poor ventilation, dust accumulation, or issues with internal cooling components.

- 1.

What happens if you don't have power at a switch box?

Lost connection at nearby outlet: If you don't have voltage at the switch box, the circuit might be disrupted by a loose connection at the outlet or switch just upstream from it. Check the nearest outlets and switches. This includes devices on the opposite side of the wall (in another room). Investigating a loss of power can be a daunting task.
