

New energy storage supports new power system

Overview

Will China develop new energy storage systems between 2025 and 2027?

BEIJING, Sept. 12 -- China on Friday unveiled an action plan to promote the development of new forms of energy storage between 2025 and 2027, amid efforts to support green energy transition and ensure the stability of new-type power systems.

What is the implementation plan for the development of new energy storage?

In January 2022, the National Development and Reform Commission and the National Energy Administration jointly issued the Implementation Plan for the Development of New Energy Storage during the 14th Five-Year Plan Period, emphasizing the fundamental role of new energy storage technologies in a new power system.

Will China's energy storage capacity exceed 50 GW by 2030?

Industry projections indicate that China's compressed air energy storage capacity will exceed 50 GW by 2030, enabling annual CO₂ emission reductions of over 200 million tons - equivalent to shutting down 60 one-gigawatt coal-fired power plants - thereby providing robust support for building a new-type power system.

Why are energy storage technologies important?

They are also strategically important for international competition. KPMG China and the Electric Transportation & Energy Storage Association of the China Electricity Council ('CEC') released the New Energy Storage Technologies Empower Energy Transition report at the 2023 China International Energy Storage Conference.

New energy storage supports new power system

[New Energy Storage Technologies Empower Energy ...](#)

The grid-forming energy storage system (ESS) has become one of the key technologies for new power systems because it can proactively support the stability of grid voltage, frequency, and power angle.

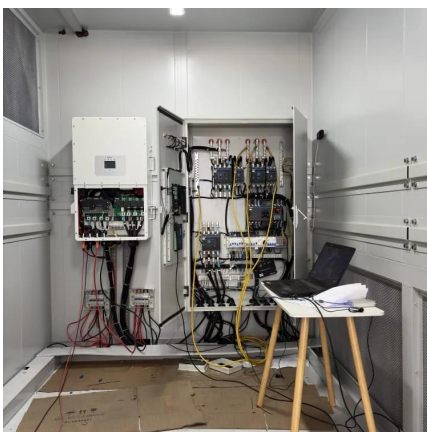

[China Achieves Breakthrough in Core Energy Storage ...](#)

Industry projections indicate that China's compressed air energy storage capacity will exceed 50 GW by 2030, enabling annual CO2 emission reductions of over 200 million tons ...

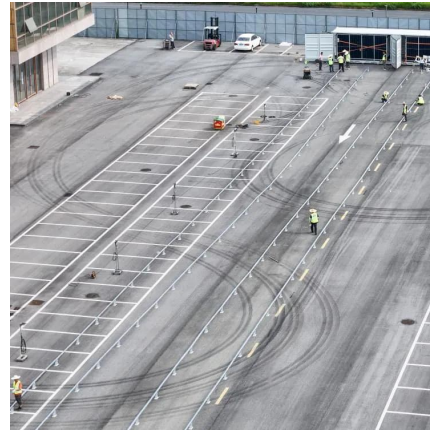

China unveils three-year action plan to boost new-type energy storage

China on Friday unveiled an action plan to promote the development of new forms of energy storage between 2025 and 2027, amid efforts to support green energy transition and ...

[Research on the Development of New Energy Storage ...](#)

In the context of the accelerated development of new power systems, novel energy storage technologies have attracted considerable attention due to their pivotal role in ...

China steps up new energy storage construction

New energy storage, or energy storage using new technologies, such as lithium-ion batteries, liquid flow batteries, compressed air and mechanical energy, is an important ...

The Development of New Power System and Power ...

Carry out research on the configuration of new energy storage for offshore wind power; promote the rational configuration of new energy storage for coal-fired power; explore ...

China Focus: New energy-storage industry booms amid ...

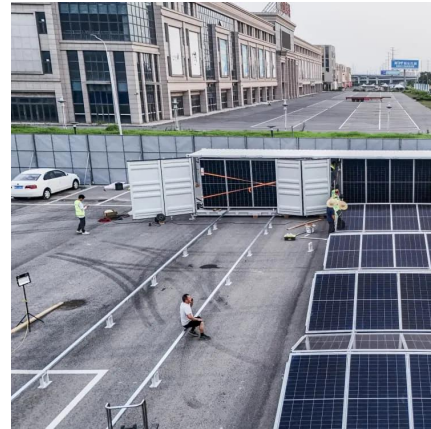

Recognizing the diverse scenarios and needs in power systems, China is encouraging technological innovation in new energy storage, achieving breakthroughs across ...

Long-duration energy-storage technologies: A stabilizer for new power

Against the backdrop of realizing the target of "carbon peak and carbon neutrality", renewable energy sources such as wind and solar power have developed rapidly. However, ...

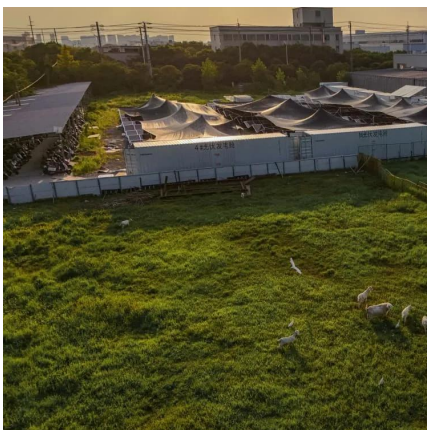

Long-duration energy-storage technologies: ...

Against the backdrop of realizing the target of "carbon peak and carbon neutrality", renewable energy sources such as wind and solar power have developed rapidly. However, the inherent randomness, ...

New Energy Storage Technologies Empower Energy ...

Foreword Stepping up efforts to develop new energy storage technologies is critical in driving renewable energy adoption, achieving China's 30/60 carbon goals, and ...

Grid-Forming ESS Technology: Key to New Power Systems

The grid-forming energy storage system (ESS) has become one of the key technologies for new power systems because it can proactively support the stability of grid ...

[China Achieves Breakthrough in Core Energy ...](#)

Industry projections indicate that China's compressed air energy storage capacity will exceed 50 GW by 2030, enabling annual CO2 emission reductions of over 200 million tons - equivalent to shutting down ...
