

# Onsite Energy Solar Panel Fixing

## Overview

---

Why should your business use solar panels?

Solar panels enable your business to generate its own power, providing renewable electricity to meet some or all of your energy needs. As more and more companies are setting sustainability targets and committing to reducing their environmental impact, generating electricity on-site can make a significant contribution.

Does Trinity Saint David have solar panels?

In partnership with The Energy Consortium (TEC), we've helped the University of Wales Trinity Saint David to install solar panels on multiple rooftops, so they can generate their own renewable energy. With energy prices where they are the installation of solar PV is a cost-efficient option and supports the university's sustainability ambitions.

Can solar panels be installed on a roof?

Solar panels can be installed on the majority of roof structures and materials. Our partners will carry out detailed structural surveys to enable them to maximise the onsite installation and generation, whilst protecting the integrity of your building. A solar system can be constructed on available land space.

Can solar PV help you achieve net zero?

Installing solar PV can be an excellent way to make use of a massively underutilised asset - your rooftop - whilst helping you accelerate your journey to Net Zero.
