## Overview

---

What is an uninterruptible power supply (UPS)?

An uninterruptible power supply (UPS) is just such an alternative source. A Uninterruptible Power Supply (UPS) generally consists of a rectifier, battery charger, a battery bank and inverter circuit which converts the commercial ac input into dc suitable for input to the battery bank and the inverter.

Do uninterruptible power supply systems provide protection?

"Uninterruptible power supply systems provide protection." IEEE Industrial Electronics Magazine 1, no. 1 (2007): 28-38. Rahmat, M., S. Jovanovic, and K. L. Lo. "Reliability and availability modelling of uninterruptible power supply systems using Monte-Carlo simulation."

Are battery-backed uninterruptible power supplies reliable?

Reliability of power sources is an increasing challenge in many sectors and battery-backed uninterruptible power supplies (UPS) are one option to protect and keep electronic equipment operating in the event of grid power failure.

What is a dynamic uninterruptible power supply?

For large power supplies, a dynamic uninterruptible power supply (DUPS) can be used. The synchronous motor/alternator is connected to the mains power supply through a choke. Flywheel stored the energy. In the event of a line failure, the stored current control keeps the load driven until the power of the flywheel is exhausted.
