

Power grid peak load and frequency regulation energy storage

Overview

To explore the application potential of energy storage and promote its integrated application promotion in the power grid, this paper studies the comprehensive application and configuration mode of battery energy storage systems (BESS) in grid peak and frequency regulation. Can a hybrid energy storage system perform peak shaving and frequency regulation services?

Then, a joint scheduling model is proposed for hybrid energy storage system to perform peak shaving and frequency regulation services to coordinate and optimize the output strategies of battery energy storage and flywheel energy storage, and minimize the total operation cost of microgrid.

How does frequency regulation affect hybrid energy storage system scheduling?

Auxiliary service effect of frequency regulation. Hybrid energy storage system scheduling result of frequency regulation. MG needs to dispatch HESS frequently according to the Reg-D signal when participating in the power grid frequency regulation service, which poses a challenge to the economic operation of BES and FES.

Can energy storage capacity configuration planning be based on peak shaving and emergency frequency regulation?

It is necessary to analyze the planning problem of energy storage from multiple application scenarios, such as peak shaving and emergency frequency regulation. This article proposes an energy storage capacity configuration planning method that considers both peak shaving and emergency frequency regulation scenarios.

How does new energy affect low-frequency load shedding strategies?

New energy affects low-frequency load-shedding strategies by changing the load structure of the power grid, reducing the inertia of the power system, and reducing the frequency regulation resources of the system .
