

# Requirements for adding solar panels

## Overview

---

What are the requirements for a solar panel installation?

Solar panel installations must comply with the National Electrical Code (NEC), specifically Article 690, which covers solar photovoltaic systems. This ensures the safety and reliability of your installation. Key considerations include proper grounding, disconnect switches, and labeling of solar equipment.

Do I need a permit to install solar panels?

Before installing solar panels yourself, you'll need to obtain the necessary permits from your local government. Most jurisdictions require both building and electrical permits for solar installations. These permits ensure your installation meets safety standards and building codes.

Can I install my own solar panels?

Installing your own solar panels can be legal and cost-effective, but navigating the regulations requires careful planning. Most states allow homeowners to install solar panels themselves, provided they obtain proper permits, follow local building codes, and pass required inspections.

Do you need an electrician to install solar panels?

Most states allow homeowners to install solar panels themselves, provided they obtain proper permits, follow local building codes, and pass required inspections. However, any electrical connections to the power grid must typically be completed by a licensed electrician.
