

Should we install solar panels from the bottom up

Overview

Should you put solar panels on your roof?

Installing solar panels is a great way to lower your energy bills and lower your carbon footprint. You can also sell extra energy you make, making them even more worthwhile. But if you want to put solar panels on your roof, where do you start?

Our step-by-step guide will take you through the solar panel installation process from start to finish.

Should I install a solar power system?

Your solar power system can be: For urban homeowners, an on-grid solar panel for home system is often the most cost-effective. Professional installation ensures long-term safety and performance. A certified installer will: Always request an AMC (Annual Maintenance Contract) and ensure post-installation support.

How to install solar panels?

The first step in solar panel installation is fixing the mounting structure to support the panels. The whole mounting structure must be tilted and have an angle between 15 to 20 degrees to have maximum sunlight exposure. For countries in the Northern Hemisphere, the best direction to face solar panels is south because it gets maximum sunlight.

Where should solar panels be installed?

The best spot for installing solar panels is generally a south-facing roof with little to no shade, as this location receives the most sunlight throughout the day. However, the exact placement varies depending on geographical location and individual circumstances.
