

# **Solar needs to be connected to the inverter first**

## Overview

---

To set up the inverter of a solar system, you need to connect the solar charge controller to the battery, connect the solar panels to the charge controller, and then connect the battery to the inverter. How to connect solar panels to inverter?

Once you have wired your solar panels in the desired configuration, you need to connect them to the inverter using the appropriate connectors and cables. Here are the connection steps to follow: Step 1: Locate the positive and negative terminals of your panel connection and the corresponding DC input terminals of your inverter.

How many solar panels can I connect to my inverter?

The maximum number of PV solar panels you can connect to your inverter isn't a fixed number. It depends on the specifications of your particular solar panels and inverter. Specifically, you have to consider the rated power output of the panels and the capacity of your inverter.

How to connect solar panels to inverter in an off-grid system?

Battery to inverter: Connect the battery to the inverter using thick battery cables, keeping the distance short and checking the inverter manual for any required fuses or circuit breakers. Disclaimer: This article only covers the basics of how to connect solar panels to inverter in an off-grid system.

Do you need a solar inverter?

Solar panels by themselves produce direct current (DC) under sunlight. Direct current can power lights or a fridge but it's not suitable for sensitive electronics like laptops or TVs. That's why you'll need a solar inverter to convert direct current to alternating (AC).
