## Overview

---

What is a solar power tower?

I. What is a Solar Tower?

A solar tower, also known as a solar power tower, is a type of solar thermal power plant that uses a large field of mirrors to concentrate sunlight onto a central tower. The concentrated sunlight heats a fluid, typically molten salt or water, which is then used to generate steam to drive a turbine and generate electricity.

What are the components of solar tower thermal power generation system?

Solar tower thermal power generation system is composed of three parts, which are the concentrating heat system, the thermal storage system and the power block. Concentrating heat system is made up of concentrating subsystem and absorber subsystem.

What is solar tower thermal power generation technology?

Solar tower thermal power generation technology, which is also referred to as central receiver technology, uses a large number of heliostats having a dual axis control system (one about the elevation axis and the other about the azimuthal axis). These heliostats reflect direct beam solar radiation to a receiver located at the top of a tower.

What is a thermal solar power tower (central receiver system)?

A thermal solar power tower (central receiver system) comprises of a field of mirrors on the ground, which focuses the solar radiation on a receiver mounted high on a central tower. You might find these chapters and articles relevant to this topic. 2011, Renewable and Sustainable Energy Reviews Atul Sharma
