

The cost of compressed air energy storage

Overview

How much does compressed air energy storage cost?

Our base case for Compressed Air Energy Storage costs require a 26c/kWh storage spread to generate a 10% IRR at a \$1,350/kW CAES facility, with 63% round-trip efficiency, charging and discharging 365 days per year.

What is compressed air energy storage?

Compressed air energy storage (CAES) is one of the many energy storage options that can store electric energy in the form of potential energy (compressed air) and can be deployed near central power plants or distribution centers. In response to demand, the stored energy can be discharged by expanding the stored air with a turboexpander generator.

When did compressed air energy storage start?

The first utility-scale compressed air energy storage (CAES) system, with a capacity of 280 MW, was established in 1978 at Huntorf in Germany. To date, one more large system of this type (McIntosh with a capacity of 110 MW in the USA in 1991) and facilities of an experimental nature have been commissioned .

What is adiabatic compressed air energy storage (a-CAES)?

The adiabatic compressed air energy storage (A-CAES) system has been proposed to improve the efficiency of the CAES plants and has attracted considerable attention in recent years due to its advantages including no fossil fuel consumption, low cost, fast start-up, and a significant partial load capacity .
