

Vilnius Power puts into operation the first 5G base station

Overview

What is the future of 5G?

The future of 5G is clear: more base stations, wider coverage, and improved connectivity. Industry forecasts suggest that by 2025, the total number of 5G base stations worldwide will surpass 5 million. This expansion will be driven by ongoing urbanization, demand for high-speed connectivity, and technological advancements.

How many base stations will 5G have in 2025?

The U.S. has ambitious plans for 5G expansion, aiming to have more than 300,000 active base stations by 2025. This goal is being driven by investment from private telecom providers and government initiatives like the Rural 5G Fund. For businesses in the U.S., this means increasing access to high-speed connectivity.

Will 5G base stations grow in 2024?

By 2024, 5G base station installations are expected to grow by over 25% annually worldwide. The growth of 5G base stations is not slowing down. By 2024, global installations are expected to increase by more than 25% annually, meaning millions of new stations will be deployed each year.

What are the challenges with 5G?

One of the biggest challenges with 5G is its energy consumption. A typical 5G base station consumes three times more power than a 4G station. This is due to the need for higher frequencies, greater bandwidth, and more antennas to ensure connectivity.
