

What communication green base station is used in Port of Spain

Overview

What frequencies does Valenciaport 5G use?

Valenciaport's 5G network will use n40 frequencies, frequencies regulated by the public administration, thus ensuring the privacy of the network in the port area and allowing for customised security, controlling the devices that are connected.

What will 5G mean for the port of València?

According to the director of the Port Authority of València (PAV), Enrique Belda, '5G will allow us to configure the technological future of the Port of València, a future that will provide advanced connectivity for the improvement of innovation and the definitive digital transformation'.

What is the port of València project?

This project is a key tool for the Port of València to advance in its digital transformation and become a benchmark in Smart Port or Port 4.0.

Will the port of València be a future-proof site?

The performance of the network will be guaranteed by technology, and the improvement of the user experience will be a reality in 2027, making the Port of València a future-proof site with a great capacity to adapt to changes in the market and technology.
