

Wholesale bess storage system in Auckland

Overview

What is Bess & how does it work?

BESS can be used for a variety of applications, including grid stabilisation, load shifting, backup power, and integration with renewable energy sources such as solar and wind power. BESS typically consists of a battery bank, power conversion systems, and control systems that manage the charging and discharging of the batteries.

Who is bessnz?

BESSNZ is a company focused on Commercial & Industrial (C&I) and large Residential battery energy storage solutions that will lower your business running costs, provide backup power if needed, and offer a data driven informed flexible approach to energy management. We exist to empower our customers to find a better way to use energy.

Why should you invest in Bess in New Zealand?

This is a very welcomed approach, and in our view, the clear and stable regulatory base provides an excellent platform for building and investing into BESS in New Zealand. BESS sits in a unique position under the Code given it both discharges electricity into the market and takes in electricity while charging.

How to maintain a Bess battery?

To ensure longevity of BESS, it is recommended to keep their operations within optimal temperature range if possible (between 15 and 35°C) – this can be achieved with cooling systems built in the Batteries. Monitor system performance for predictive maintenance and early error detection.
